

## **Communications & Power Industries Receives \$13 Million in Follow-On Orders to Support WIN-T Military Communications Program**

PALO ALTO, Calif., Feb 05, 2009 /PRNewswire-FirstCall via COMTEX News Network/ -- Communications & Power Industries, Inc. (CPI) has received an approximately \$13 million follow-on award from General Dynamics SATCOM Technologies to support Increment One of the U.S. Army's Warfighter Information Network Tactical (WIN-T) program. With this latest contract, CPI has received more than \$26 million in total awards from General Dynamics to support the WIN-T program. CPI, a subsidiary of CPI International, Inc. (Nasdaq: CPII), is a leading provider of microwave, radio frequency, power and control solutions for critical defense, communications, medical, scientific and other applications.

(Logo: <http://www.newscom.com/cgi-bin/prnh/20060426/CPILOGO>)

In 2007, General Dynamics selected CPI to supply Ku-band, high-power satellite communications amplifiers for its specialized satcom earth terminals for the WIN-T program. The program could have a total potential value of more than \$50 million to CPI over a period of four years.

WIN-T is a tactical communications system that will be the Army's primary battlefield communications network. It is intended for use by warfighters in the field, enabling them to exercise command-and control and synchronize warfighting functions from anywhere on the battlefield. Increment One of WIN-T seeks to provide soldiers with a high-capacity, reliable, secure communications network when they are "at the halt."

About CPI International, Inc.

CPI International, Inc., headquartered in Palo Alto, California, is the parent company of Communications & Power Industries, Inc., a leading provider of microwave, radio frequency, power and control solutions for critical defense, communications, medical, scientific and other applications. Communications & Power Industries, Inc. develops, manufactures and distributes products used to generate, amplify, transmit and receive high-power/high-frequency microwave and radio frequency signals and/or provide power and control for various applications. End-use applications of these systems include the transmission of radar signals for navigation and location; transmission of deception signals for electronic countermeasures; transmission and amplification of voice, data and video signals for broadcasting, Internet and other types of commercial and military communications; providing power and control for medical diagnostic imaging; and generating microwave energy for radiation therapy in the treatment of cancer and for various industrial and scientific applications.
